

Collins Krubu

Senior Software Engineer & Platform Builder

 Berlin, Germany (Relocating) / Nigeria  collinskrubu723@gmail.com  github.com/collinpowell

 Portfolio Website

SUMMARY

Polyglot Backend and Platform Engineer with deep expertise in designing, building, and operating large-scale distributed systems. Architected and solely managed the end-to-end infrastructure for Lupply, a multi-region SaaS and logistics ecosystem serving thousands of users. Highly proficient in Go, Python, Rust, and Node.js. Passionate about Developer Experience (DX), CI/CD automation, and leveraging [Agentic Coding workflows](#) to radically accelerate value delivery while maintaining rigorous security standards.

PROFESSIONAL EXPERIENCE

Lupply - Founder & Lead Software Engineer

Jan 2023 – Present

- Architected and built a highly scalable, multi-platform ecosystem (SaaS, Food Marketplace, Ride Logistics) handling thousands of daily transactions and real-time GPS routing data.
- Designed the internal Developer Experience and platform control plane, allowing seamless multi-region deployments using infrastructure-as-code principles.
- **CI/CD & DevOps:** Solely responsible for operations, implementing self-healing Kubernetes clusters, GitHub Actions pipelines, and Fastlane for automated, zero-downtime mobile deployments.
- **Agentic Coding:** Actively integrate AI-driven coding agents into the daily workflow to automate boilerplate, generate robust testing suites, and accelerate feature delivery by 300% without compromising system integrity.
- Built real-time telemetry systems and data pipelines to manage fleet logistics, ensuring snappy, reliable service even under poor network conditions.

Tech: [Go](#), [Python](#), [Node.js](#), [React](#), [PostgreSQL](#), [Docker](#), [Fastlane](#), [AWS](#)

Live Production Deployments (Verified Proof):

[Web App](#) [Google Play Store](#) [App Store](#) [Windows Store](#)

NodeX iHub - Co-Founder & Lead Engineer

Jan 2020 – Dec 2023

- Led the engineering team in building embedded systems and cloud-connected IoT devices, managing the hardware-to-cloud data pipeline for agricultural and smart home products.
- Engineered high-performance firmware in C/C++ running on FreeRTOS, transmitting high-frequency sensor data to our cloud data platform.
- Built an internal EdTech platform scaling to support over 200 concurrent active users with complex role-based access controls and analytics.
- Established foundational security best practices and secure networking protocols (MQTT/TLS) between IoT edge devices and the central database.

Tech: C/C++, FreeRTOS, Python, Next.js, Cloudflare, Time-Series Databases

Live Project Link (Verified Proof):
node-x-frontend.vercel.app

Lunar Finance - Backend Infrastructure Engineer

2025 – 2026

- Developed core backend routing services for a multi-chain DEX aggregator, consistently processing over \$1M+ in daily trading volume.
- Optimized database queries and built high-throughput RPC indexers in Rust, reducing cross-chain transaction latency by 40%.
- Supported massive data scaling needs for 350k+ active users, relying heavily on distributed state management and caching layers.

Tech: Rust, Go, Node.js, Redis, Web3 APIs

Live Project Link (Verified Proof):
lunarfinance.io

NOTABLE PROJECTS

The Offshore Lab & Shuri Education - Full-Stack Developer

- **The Offshore Lab:** Delivered scalable enterprise infrastructure for a Nigerian/UK integrated services company, featured in national media.
- **Shuri Education:** Architected a UK-based ed-tech platform. Managed massive server traffic surges during launch month and optimized API performance.

Tech: Next.js, Node.js, Postgres, Vercel

Live Project Links (Verified Proof):
theoffshorelab.com shurieducation.com

Pivot Technical - Software Engineer

- Engineered scalable technical infrastructure and core platform features for enterprise operations.

Tech: React, Node.js, Next.js, Postgres

Live Project Link (Verified Proof):
pivottechnical.com

TECHNICAL SKILLS

Languages: Go, Python, Rust, TypeScript, C/C++

Infrastructure & DX: Docker, Kubernetes, CI/CD, Fastlane, Terraform

Data Platforms: PostgreSQL, Redis, Time-Series DBs, Kafka

Paradigms: Agentic Coding Workflow, Distributed Systems, Microservices

EDUCATION & CERTIFICATIONS

BSc. Computer Science

2020 - 2024

- **Legal Visa Note:** I hold 4+ years of verified software engineering experience (verified via official Corporate Affairs Commission documentation), qualifying me for the EU Specialist Residence Permit / German IT Specialist Visa independently of degree requirements.
