Port Harcourt, Nigeria · Open to Relocation — Berlin/Stuttgart/Ulm

Backend engineer with production Go and Kubernetes experience, plus a hands-on embedded/IoT background that most backend engineers don't have. Architected Go microservices orchestrated on Kubernetes for a multi-platform commerce suite, with gRPC/Protobuf for internal service communication. Separately, co-founded an IoT product studio building ESP32-based hardware that streams real-time telemetry to cloud backends — genuine first-hand experience with the edge-to-cloud data flow that industrial IoT platforms are built around. Comfortable owning services end to end, from API design through Kubernetes rollout and production monitoring.

## CORE SKILLS

### Backend

Go (Golang) — microservices, real-time systems, service architecture  
gRPC / Protobuf — internal service communication, API contracts  
Node.js / NestJS / Express — REST APIs, auth, integrations  
Python — data pipelines, automation  
PostgreSQL, MongoDB, Redis — data modelling, caching

### IoT / Edge Systems

ESP32 / embedded C/C++ — hardware product development  
FreeRTOS — task scheduling on constrained devices  
Real-time hardware-to-cloud telemetry pipelines  
Sensor/actuator integration and remote control systems

### Cloud & Infrastructure

Kubernetes — deployment, orchestration, cluster management  
Docker — containerisation, service isolation  
AWS — EC2, S3, Lambda, cloud infrastructure  
CI/CD — GitHub Actions, GitLab CI  
Monitoring & observability practices for production services

### Workflow & Collaboration

AI-assisted / agentic development — Claude Code, GitHub Copilot  
Code review, architecture decisions, engineering standards  
Team leadership — 5+ engineers, mentoring  
Cross-functional collaboration — product, data, DevOps

## EXPERIENCE

**Luply** — *Founder & Engineering Lead* 2019 – Present · Remote

<https://luply.com>

- Architected backend services in Go, deployed as Kubernetes-orchestrated microservices across a four-platform commerce suite (POS, marketplace, food delivery, logistics); used gRPC/Protobuf for internal service-to-service communication.
- Built real-time delivery-tracking and analytics pipelines processing continuous location and order-status data streams.
- Maintained CI/CD pipelines via GitHub Actions and GitLab CI across all services; deployed on AWS with infrastructure-as-code practices.
- 40,445+ orders processed across web, iOS, Android, and Windows. Led a team of 5+ engineers, with code review and architectural ownership.

**NodeX iHub** — *Co-Founder & Embedded Systems Engineer* 2020 – 2023 · Warri, Nigeria

<https://www.nodexihub.com>

- Co-founded an embedded-systems and IoT product studio, building ESP32-based hardware products with real-time sensor data pipelines to cloud backends.
- Built a sensor-driven farm irrigation automation system on ESP32 microcontrollers using FreeRTOS, handling continuous sensor telemetry and remote actuation.
- Built ESP32-based smart home devices (smart sockets, smart changeover switches) with cloud-connected remote monitoring and control.
- Established Kubernetes deployment workflows and CI/CD for the studio's cloud-facing services; mentored engineers in embedded systems and backend development.

**Luna Finance** — *Backend Engineer* Contract · Remote

- Designed REST APIs and service architecture for a high-traffic fintech platform serving 300K+ users; reduced response times by 80% through query optimisation and caching.

- Maintained Docker-based deployment infrastructure and CI/CD pipelines; enforced security best practices across all endpoints.

## EDUCATION

---

**Federal University of Petroleum Resources (FUPRE), Warri** 2017 - 2022

*BSc Computer Science · 2nd Class Upper Honours*

## LANGUAGES

---

English — Native / Full Professional Proficiency

German — Learning

## AVAILABILITY

---

 Open for Relocation — Stuttgart, Ulm, or Berlin  Full-Time  Available Immediately
