Dear PPRO Hiring Team,

I am applying for the Staff Frontend Engineer position in Munich. When I read the vision for your Frontend Platform team—unlocking a frictionless path to millions of customers via a modern micro frontend ecosystem—I recognized the exact architectural challenges I have spent the last few years solving.

As the sole architect of Lupply, I designed and built a distributed frontend ecosystem serving distinct domains: a business dashboard, a consumer marketplace, and a logistics tracker. I understand the complexities of building independent UI applications that must share core components without breaking runtime boundaries. While I am highly proficient in React, TypeScript, and modern build tooling like Webpack and Vite, my focus has increasingly been on **infrastructure-level frontend engineering**: establishing CI/CD pipelines (via GitHub Actions and Docker), defining shared dependency strategies, and ensuring different frontends can be deployed autonomously without stepping on each other's toes.

Operating at a Staff level requires more than just writing code; it requires designing scalable architectures and mentoring teams to adopt them pragmatically. At NodeX iHub, I led a cross-functional engineering team, establishing agile methodologies, instituting pair programming, and defining clean code standards. I treat developer experience (DX) and frontend performance as non-negotiable features, and I heavily utilize Agentic Coding workflows to radically accelerate deployment cycles while maintaining rigorous technical contracts.

Furthermore, my background is deeply rooted in cloud-native environments (AWS, Kubernetes, CDN-based deployments), giving me a holistic understanding of how federated frontends move from code to production at scale.

I am highly motivated by PPRO's mission and the technical mandate of this role. I hold 4+ years of verified software engineering experience (proven via official Corporate Affairs Commission documentation) which fully satisfies the requirements for the German IT

Specialist Visa independently of a university degree. I am ready to relocate to Munich and can start within 3–4 months upon visa approval.

I look forward to discussing how I can help evolve PPRO's micro frontend platform and shape the technical standards of your team.

Best regards,

Collins Krubu
