

Collins Krubu

Senior Full Stack Developer — Web Platforms

 Berlin, Germany (Relocating)  collinskrubu723@gmail.com  github.com/collinpowell  Portfolio

SUMMARY

Full stack web engineer with 4+ years of verified experience building, shipping, and operating production-grade web platforms, CMS-driven content systems, and multi-platform applications. I have sole end-to-end ownership of Lupply — a live web platform ecosystem with admin dashboards, content management workflows, and cross-platform deployments (Web, iOS, Android, Windows). Comfortable making architectural trade-offs, improving Core Web Vitals and technical SEO, and working across frontend (HTML, CSS, JavaScript, React, Next.js, Tailwind CSS) and backend (Node.js, Go, Python). My background in **C/C++ embedded systems** means I can confidently interface with non-web backend systems — including C++ codebases — which most web developers cannot.

PROFESSIONAL EXPERIENCE

Lupply — Founder & Lead Full Stack Engineer Jan 2023 – Present

- Designed, built, and evolved a production web platform ecosystem from scratch — including a SaaS dashboard, food marketplace, logistics tracker, and online store — serving enterprise clients with active daily users.
- Built and maintained the CMS back-end and admin dashboard that enables non-technical team members to manage products, orders, content, and publishing workflows without developer intervention.
- Drove architectural improvements across the web stack: migrated rendering strategies for better Core Web Vitals, optimized image pipelines, and implemented structured data for technical SEO.
- Sole owner of all CI/CD and deployment infrastructure — GitHub Actions pipelines, Fastlane for automated mobile releases, Docker containerization. Every release, every environment, every platform.
- Cross-system integration:** Built reliable data exchange layers between the web platform and native mobile/desktop clients, handling real-time GPS telemetry, payment processing, and fleet management.

Tech: Next.js, React, Node.js, Go, TypeScript, Tailwind CSS, PostgreSQL, Docker, Fastlane, AWS

Live Production Deployments (Verified):

Web App Food Marketplace Online Store Google Play App Store Windows Store

NodeX iHub — Co-Founder & Lead Engineer Jan 2020 – Dec 2023

- C/C++ Systems Integration:** Engineered firmware in C/C++ on ESP32 microcontrollers running FreeRTOS, building smart home devices, an automated farm irrigation system, and a coin-operated vending machine — all connected to cloud services via MQTT/TLS.
- Built the full web platform for an internal EdTech product supporting 200+ concurrent users, including role-based access controls, content management, analytics dashboards, and API performance optimization.
- Managed the complete hardware-to-cloud data pipeline — sensor data collection, real-time telemetry, and web dashboard visualization — bridging embedded C++ systems with web-based interfaces.

Tech: C/C++, ESP32, FreeRTOS, MQTT, Python, Next.js, Node.js, Cloudflare, Time-Series DBs

Live Project (Verified):
node-x-frontend.vercel.app

Shuri Education — Full Stack Developer

Client Work

- Architected a UK-based ed-tech content platform from the ground up. Built the CMS, content publishing workflows, and user-facing interfaces that allowed educators to manage and distribute course materials at scale.
- Managed server traffic surges during launch month — optimized database queries, API response times, and static asset delivery to maintain reliable performance under sudden load.
- Worked directly with stakeholders from design, marketing, and education teams to translate business requirements into clean technical solutions.

Tech: [Next.js](#), [Node.js](#), [PostgreSQL](#), [Cloudinary](#), [Vercel](#)

Live Project (Verified):
shurieducation.com

The Offshore Lab — Full Stack Developer

Client Work

- Delivered a scalable enterprise web platform for a Nigerian/UK integrated services company. Built the frontend interfaces, backend APIs, and content management features. Featured in TechCabal and national media.

Tech: [Next.js](#), [Node.js](#), [Vercel](#)

Live Project (Verified):
theoffshorelab.com

Lunar Finance — Backend & Performance Engineer

2025 – 2026

- Built backend routing services for a high-traffic web application (multi-chain DEX aggregator) processing \$1M+ daily volume with 350k+ active users.
- Optimized database queries and built high-throughput RPC indexers in Rust, cutting cross-chain transaction latency by 40%. Direct experience with performance-critical, high-traffic web platforms.

Tech: [Rust](#), [Go](#), [Node.js](#), [Redis](#), [Web3 APIs](#)

Live Project (Verified):
lunarfinance.io

Pivot Technical — Software Engineer

Client Work

- Built core platform features and scalable technical infrastructure for an enterprise operations platform.

Tech: [React](#), [Node.js](#), [Next.js](#), [PostgreSQL](#)

Live Project (Verified):
pivottechnical.com

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, MUI

Backend: Node.js, Express, Go, Python, REST APIs, WebSockets

Systems Integration: C/C++, Rust, ESP32, FreeRTOS, MQTT

Frontend Tools: Tailwind CSS, Alpine.js (familiar), Figma, Responsive Design

Databases: PostgreSQL, MongoDB, Redis, Time-Series DBs

DevOps & CI/CD: Docker, GitHub Actions, Fastlane, Vercel, AWS

LANGUAGES

English (Native) · German (A1 — actively accelerating via intensive daily study toward B1/B2)

EDUCATION

BSc. Computer Science 2020 – 2024

- **Visa Note:** I hold 4+ years of verified software engineering experience (verified via official Corporate Affairs Commission documentation), qualifying for the German IT Specialist Visa / EU Blue Card independently of degree requirements.
