PROFILE

Polyglot Software Engineer with 5+ years of experience architecting end-to-end logistics platforms, automated inventory systems, and IoT hardware integrations. Deeply rooted in compiled systems languages (Java, C, Rust, Go) and highly proficient in modern web ecosystems. Proven track record of bridging the gap between high-performance backend infrastructure and physical hardware, with multiple live applications deployed across Google Play and Microsoft Store.

TECHNICAL SKILLS

Languages: Java, C/C++, Rust, Go (Golang), JavaScript/TypeScript. **Backend & Infra:** Spring Boot, Node.js, Docker, AWS (EC2, S3), RabbitMQ.

Databases: PostgreSQL, MongoDB, Redis. **Frontend & Mobile:** React, Next.js, React Native, Redux.

Hardware / IoT: Embedded C, ESP32, FreeRTOS, Sensor Integration, Traffic Systems.

PROFESSIONAL EXPERIENCE

Lead Software Engineer | CPX Limited (Lupply) Jan 2021 – Present

- Architected and deployed **Lupply**, a comprehensive B2B SaaS logistics platform managing food delivery routing and scalable vendor inventory.
- Built highly concurrent backend infrastructure in Go (Golang) and Node.js, managing complex driver routing state and real-time inventory updates.
- Designed scalable NoSQL database schemas using MongoDB to handle thousands of asynchronous delivery events.
- Successfully published and maintained native applications across the Google Play Store (Lupply App, Lupply Food) and the Microsoft Store.
- Managed all infrastructure orchestration utilizing Docker containerization and AWS deployments.

Live Deployments:
Lupply Web Google Play (App) Google Play (Food) Microsoft Store

Software Engineer (IoT & Logistics Infrastructure) | NodeX iHub Jan 2020 – Jan 2024

- Developed and deployed real-world IoT hardware infrastructure, including a sensor-driven agricultural system and physical smart traffic lights.
- Wrote low-level firmware in C/C++ (FreeRTOS) to interface with physical logistics hardware.

- Built the backend data ingestion pipelines capable of receiving and processing real-time telemetry from distributed hardware nodes.
- Bridged the gap between physical machine execution and web dashboards, providing clients with real-time operational oversight.

Live Project:

node-x-frontend.vercel.app

Backend & Performance Engineer | Lunar Finance

2025 – 2026

- Built backend routing services for a high-traffic web application (multi-chain DEX aggregator) processing \$1M+ daily volume with 350k+ active users.
- Optimized PostgreSQL database queries and built high-throughput RPC indexers in Rust, cutting cross-chain transaction latency by 40%. Direct experience with performance-critical, high-traffic distributed platforms.

Live Project:

lunarfinance.io

Full Stack Developer | Shuri Education & The Offshore Lab

2021 – 2023

- Delivered scalable enterprise web platforms and core software infrastructures for multiple B2B clients.
- Led full-stack development lifecycles using React, Next.js, and Node.js, ensuring high performance and responsive user experiences.

Live Projects:

EDUCATION

- **Certificate in Embedded Systems** (2019)
- **Self-Taught Engineering / Entrepreneurship** (Focused on Systems Engineering, IoT, and Full-Stack Architecture)
- **O-Level / SSCE Certification**
