Dear Picnic Technologies,

I am writing to apply for the Software Engineer position. When I read that Picnic recently raised €430M to scale its automated fulfillment centers and is looking for product-minded engineers to solve complex supply chain problems, I knew I had to apply. I have spent the last 5 years doing exactly that: building logistics, delivery, and IoT platforms from the ground up.

As the lead software engineer for **Lupply**, I architected and shipped a comprehensive SaaS platform that includes a dedicated food delivery routing application and a scalable B2B logistics system. I owned this product entirely from concept to delivery—designing the Postgres database schemas, building the native apps, and deploying the backend microservices (in Go) via Docker and AWS. I understand firsthand the complexities of routing optimization, inbound/outbound product execution, and managing massive, asynchronous event loads.

Furthermore, my work at **NodeX iHub** involved deploying real-world IoT hardware (smart traffic light systems) and handling real-time data ingestion. I wrote the firmware in C/C++ and built the pipelines that bridged the gap between physical logistics hardware and backend software. This experience translates directly to Picnic's electric vehicle and automated warehouse supply chains.

I am a true polyglot systems engineer. While my recent backend architectures have utilized Go, C, and TypeScript, **Java was my first language**. I am deeply rooted in core software engineering principles, compiled languages, distributed systems, and message brokers (RabbitMQ). I am highly comfortable with React, PostgreSQL, Docker, and AWS—core pillars of your tech stack. As an engineer with a true product mindset, I thrive on picking up paradigms quickly and am more than ready to dive into Java 21 and Spring Boot 3 to optimize Picnic's logistics domain.

I am highly motivated by your mission to create a sustainable food supply chain. Given my experience running my own remote infrastructure, I am highly open to starting immediately as a remote B2B contractor to ensure I can make an impact from day one. I am also fully prepared to relocate to the Netherlands (I qualify for the Highly Skilled Migrant visa) once the necessary paperwork is processed.

I would welcome the opportunity to discuss how my hands-on experience building delivery and hardware logistics platforms can contribute to Picnic.

I have included links to my portfolio and live applications below. Thank you for your time and consideration.

Best regards,

Collins Krubu
